

Remote Working Webinar

Managing your business remotely: Free webinar from a technology expert to help you optimize the performance of your business's remote working environment.

Wednesday, May 20TH, 2020, 9am PT - [Register today!](#)

The majority of businesses in British Columbia have now been working remotely for the past 4-6 weeks. But how effectively are you managing your team and your business? Do you have the right tools and processes to maintain business efficiency and productivity and keep your staff engaged?

Remote working is about communication, planning, the right tools, and a positive attitude. During this webinar, we will show companies how to optimize their set up, focusing on their people, the technology, and the processes that power a productive remote working environment. Applying this knowledge means you can still support your customers, maintain your business efficiency, and have a happy and productive team.

The good news is that remote working has been a common practice in the tech sector for many years and our tech expert, Eric Aizer, is well placed to share best practices and advice for small to medium-sized businesses in BC.

OPTIMIZING YOUR SET UP

Learn about the processes and technology you need to efficiently work remotely for your business

SUPPORTING YOUR STAFF

Different practices you can adopt to help your teams stay engaged, productive and thriving in a remote working environment

RECOVERY PHASE

Maintaining technology and efficiency when you go back to work

Who is it for?

For small to medium-sized companies in non-tech industries looking to learn about what technologies to optimize their remote working environment and plan for when teams go back to work.

Cost

The BC Tech remote working webinar is free for participants.

The Presenter

Eric Aizer is a veteran of the local technology scene with over 20 years' experience working for technology companies such as SAP, Business Objects, Crystal Decisions, Maximizer, Realtor.com and most recently Visier. Eric's experience managing and leading remote teams has crossed the globe and incorporates a combination of people, process and technology factors.
